Please note

* Dependent on student numbers some modules may offer multiple study visits during the week of the on-site visit. During COVID-19 we may also offer on-site visits prior to, or after the above start dates to allow as many students to be able to attend an on-site visit safely.

Each module is 15 credits and will typically run for around 8 weeks from the module start date. Some exceptions to this include: the September introductory module where some pre-recorded lectures will be made before the start date; and

the Applied Research Design module, which has a dedicated study visit in May for a group work project, but will also include activities over the year prior to starting your dissertation module.
